KUBA MATRAS

JUNIOR SOFTWARE ENGINEER

Currently I am second-year student of Computer Science. I learn programming mainly on my own. I like challanges and diving into new concepts. Hence I am ready to learn any technology to solve real-time problems.

See my portfolio: https://pozerinhooo.github.io/Portfolio-page/

SKILS

Backend technolgoies

- Java
- Spring Boot
- MySQL,
- GIT & Github
- Docker

Forntend technolgoies

- HTML
- CSS
- Javascript
- Typescript
- Angular

PROJECTS

#1 Reddit clone

https://github.com/pozerinhooo/Reddit-clone-frontend

This is the biggest project I've created. Besides images all data are being kept in MySQL database. For images storing I chose internal cloud server Amazon S3. Moreover in app we can manipulate with our account profile. During application development I learnt a lot of about Angular and REST API. Check screenshots on github!

#2 Ecommerce for fighters

https://github.com/pozerinhooo/ECommerce-MMA-shop-Angular-FrontEnd

Ecommrce with products conected to martial arts. In project I've learnt about: pagination, REST API, stripe payments, etc. As a user you can also review prodcuts and see your orders history.

#3 QuizQub

https://github.com/pozerinhooo/QuizQubFrontend

I've created this project for myself to learn English and interview questions in area of Java and Angular. In app I've implemented JWT role based authentication. Student can does quizzes, teacher can create questions and admin can manipulate with accounts. Check on github!

Screenshots and backend repositories are available on github.
