KUBA MATRAS

JUNIOR SOFTWARE ENGINEER

Currently I am second year student of Computer Science. I learn programming mainly on my own. I like challanges and diving into new concepts, hence I am ready to learn any technology to participate real project development.

Zespół Szkół Ogólnokształcących nr 1 im. Komisji Edukacji Narodowej w Puławach

2021 - nowadays

Politechnika Lubelska Informatyka

PROJECTS

#1 E-Tutor

https://github.com/pozerinhooo/E-Tutor-FrontEnd

The main goal of E-Tutor project was to create a place in web where we can post advertisements about tutority. As a user you can post advertisements either as a person who teaches or a person who needs help

#2 Ecommerce for fighters

https://github.com/pozerinhooo/ECommerce-MMA-shop-Angular-FrontEnd

E-Commerce with equipment for martial arts. In app I've implemented Stripe payments integration

#3 QuizQub

https://github.com/pozerinhooo/QuizQubFrontend

Firstly main goal was to create application that will help me with learning questions for technical interviews in area of Java, however currently there are more other options (quizes, mainpulating with accounts, creating own sets of questions etc.)

#4 RedditClone

https://github.com/pozerinhooo/RedditCloneBackend

Clone of popular Reddit application. For images storage I used Amazon S3.

Screenshots and backend repositories are available on github.
